THE ECLIPSE

Every day the sun comes out to illuminate us with its beautiful and magical rays of light, there is never a day when he does not come out.

One day the day was very strange, something was missing, exactly, it was the magic light of the beloved sun, it was very strange because that never happened, he always went out, without exception. Everyone was surprised by that, so a very determined cloud went to ask Mr. Sun what was wrong with him, that everyone missed him, that they missed his magical rays of light, insisting on knowing what was happening to him, that why he did not want to illuminate the day. The very sad sun told him that he was embarrassed to tell him what was happening to him since he thought it was something absurd, but that it affected him a lot, the cloud told him that nothing was wrong, that he would understand without any problem, that all he wanted was to be able to help him. After he spent some time insisting that he tell him what was happening to him, the sun made up his mind and wanted to tell him.

- I feel very sad because I haven't seen the Moon for a long time, not being able to spend even a little while by her side, I miss her so much, I can't stop thinking about her, it's inevitable not do that, not to think about her beautiful smile, in her resplendent light that illuminates my eyes with love and tenderness.- Said the sun in love.

To which the cloud replied:

- I never imagined that you would tell me that, Mr. Sun, I could think too many things but never that- said the surprised cloud -Now that you tell me, I understand you, I understand how you feel and I understand that you are sad right now, it must be difficult to be in love with someone and not being able to see her very often- the cloud continued to say.

"Yes, believe me it is," said Mr. Sol.

-But you know what, I have a great idea- the cloud replied to Mr. Sun.

-what idea?- said the sun -Pay attention, I can make you look at yourself for at least a few minutes with the Moon, but yes, you must be very fast, if you take longer than

you should it could cause many problems in the world, everyone would get scared and they would look bad for that-

-But how will you do that? It is something impossible- said the Sun

-Of course I can- replied the proud cloud - We can make a SOLAR ECLIPSE happen-

- Incredible, you tell me what to do, I'm all ears-

-Okay, listen, I'll talk to the moon and I'll tell her to escape from where it is for a moment, I'll tell her to come for a while, you both hide behind me, just remember a moment, you must be quick, I'll cover you at that moment, but yes, the day will turn dark where we will be, that is why it must be fast, after that, everyone returns to their work and the end, everyone is happy- the cloud ended

-Incredible Cloud, you are spectacular- answered the Sun very excited.

Hours later, the moment came when the moon and the sun would meet...

Everyone took their places, the Moon got closer and closer, until it ran into Mr. Sun behind the cloud. The day turned dark for a moment but quickly lit up again with the beautiful rays of light from Mr. Sun, who was already happy to have seen her beloved Luna.

And that's how the first solar eclipse happened.
