

La Célula Vegetal

Tienen forma poligonal
Su vacuola ocupa más espacio que en otras células y desplaza al núcleo.
El color verde de los cloroplastos se debe a la clorofila.

The image contains two visual elements. On the left is a 3D diagram of a plant cell with various organelles labeled: 'Pared celular' (cell wall), 'Plasmodesmo' (plasmodesma), 'Citosplasma' (cytoplasm), 'Membrana plasmática' (plasma membrane), 'vacuola' (vacuole), 'cloroplasto' (chloroplast), 'Núcleo' (nucleus) which includes 'Poro nuclear' (nuclear pore), 'Membrana nuclear' (nuclear membrane), and 'Nucleolo' (nucleolus). On the right is a micrograph of plant cells with arrows pointing to 'Cloroplastos' (chloroplasts) and 'Pared celular' (cell wall).
